Getting Started with Arduino UNO. This document explains how to connect your Uno board to the computer and upload your first sketch. The Arduino Uno is programmed using the Arduino Software (IDE), our Integrated Development Environment common to all our boards and running both online and offline. For more information on how to get started with the Arduino Software visit the Getting Started page.

Arduino - ArduinoUno

This is very strange indeed, I've ordered and tested a kit from our warehouse and it's functioning exactly as described in the article. In the video I see that you have the circuit powered from mains (mandatory during configuration!), with LED2 blinking at 1Hz, indication that there's no receiving phone number stored in EEPROM, so apparently the configuration somehow, somewhere failed.
