Architectural rendering is the process of creating 2D and 3D images of a design that illustrates how a proposed space or building will look, even before the real project begins. The real-time rendering, which was once considered too good to be true, has now become an essential requisite for the industry's growth.

It is where the rendering of all 3D objects, light sources, lighting models, textures, cameras and more happens. Some also refer to it in layman's terms as "the magic." Specifically, the real-time rendering pipeline consists of three conceptual stages: the application stage, the geometry stage, and the rasterizing stage.
