International Space Station The International Space Station (ISS) is a permanently crewed, multinational space laboratory in low-Earth orbit. Continuously staffed since 2 November 2000, it is the longest-running space station program of all time, and consistently cited among the world's most ambitious engineering projects.

International Space Station | The Planetary Society

The International Space Station (ISS) is a space station, or a habitable artificial satellite, in low Earth orbit.Its first component launched into orbit in 1998, the last pressurised module was fitted in 2011, and the station is expected to be used until 2028.

International Space Station Facts for Kids

The International Space Station is a space station in low Earth orbit. The ISS programme is a joint project between five participating space agencies: NASA, Roscosmos, JAXA, ESA, and CSA. The ownership and use of the space station is established by intergovernmental treaties and agreements. The ISS serves as a microgravity and space environment research laboratory in which crew members conduct experiments in biology, human biology, physics, astronomy, meteorology, and other fields. The station i

International Space Station - Wikipedia

The International Space Station is roughly the size of a six-bedroom house and weighs more than 320 cars -- it's so large that no single rocket could have lifted it into orbit. Instead, it was assembled piece by piece while hurtling through space at 28,000 kilometers per hour, lapping the Earth once every 90 minutes.
